

ARCHITECTURAL BARRIERS

Colour Selection Guide

Choosing the colour and surface finish for your balustrade, screen or handrail is a crucial part of the design process for your project. It is important that you choose the right product for the right application to ensure the surface finish of your balustrade is preserved for generations to come.

Our simple step-by-step guide will help you through this process.

Step 1

Choose the right product.

Depending on your project's location and type, different ranges of powder are advised so that it stands up to the harsh New Zealand conditions.

Wondering which powdercoat range suits your application best? Visit www.duluxpowders.co.nz/specmap/

Step 2

Choose the right colour.

- There are a number of options to choose from. A good place to start is our popular range of 133 colours shown overleaf.
- Want to view the colour online, or receive a sample? Visit www.duluxpowders.co.nz to see the entire range or request a sample swatch.
- If you want a colour that is not in our popular range, discuss this with your account manager, or email info@unex.co.nz
